

DR MOTORS

SUPERIOR PERFORMANCE MOTORS

D&R is a well-established company known for its outstanding reputation based on performance, proven reliability, and service. We service our motors to the highest standards to ensure that every motor that arrives at your location will operate at its optimal performance.

The bottom end bearing section and adjustable bent housing contain numerous exclusive improvements in technology to handle today's tough drilling conditions. We have a wide range of available power sections to suit your needs including even rubber thickness (ERT) power sections for applications requiring more torque. Our motors are designed to operate in a variety of drilling fluids and viscosities.

SIZES AVAILABLE

2-3/8" up to 11-1/4"

ADVANTAGES

- **INCREASED TORSIONAL STRENGTH AND LIFE SPAN**
- **HIGH PERFORMANCE WITH MORE TORQUE AND HORSEPOWER**
- **CUSTOMIZABLE MOTORS TO FIT YOUR SPEED OR TORQUE REQUIREMENTS**
- **ADJUSTABLE BENT HOUSING**
- **SUPERIOR DURABILITY**

OPTIONAL UPGRADES

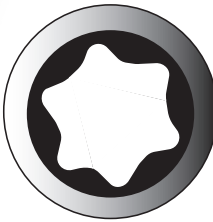

- shock subs
- agitation tools
- jars
- stabilizers
- dump sub

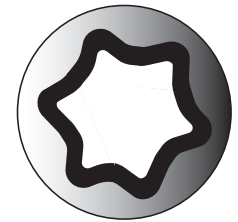

The dump sub remains open to allow the drill pipe to fill when running in or drain when pulling out of the hole. Once circulation is established, the valve automatically closes. **optional*

The progressing cavity power section converts hydraulic horsepower (HP) into mechanical HP and RPM.

The adjustable bent housing is adaptive in terms of well-steering and contains a drive shaft that connects the power section to the bearing section.

Conventional stator

ERT stator

Our bearings are built with materials specifically designed to withstand the large torques developed by current power sections.
